```java
public class NumberSquarePrinter {

    public static void main(String[] args) {
        System.out.printf("%-10s | %s\n", "Number", "Square");
        System.out.println("--------------------");

        for (int i = 1; i <= 20; i++) {
            int square = i * i;
            System.out.printf("Number: %-2d  | Square: %d\n", i, square);
        }
    }
}
```
