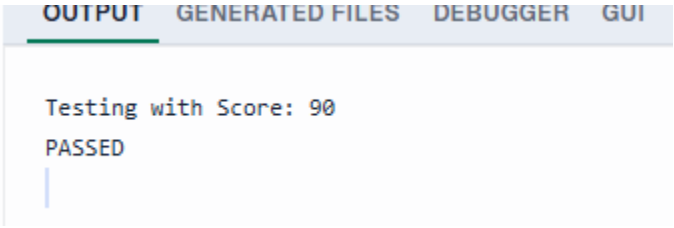
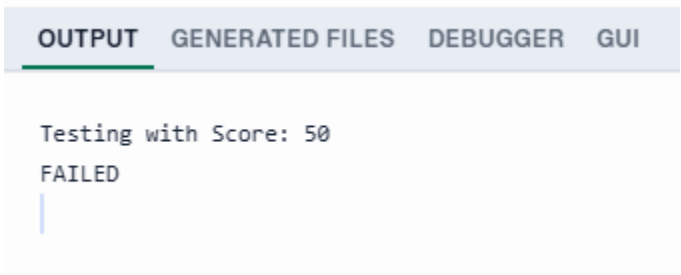
```
public class SimpleGradeClassifier {
    public static void main(String[] args) {
        // 1. Declare an int score variable with a test value
        int score = 90;

        System.out.println("Testing with Score: " + score);

        // 2. Use a single if-else statement to classify the score
        if (score >= 60) {
            System.out.println("PASSED");
        } else {
            System.out.println("FAILED");
        }
    }
}
```





```
public class SimpleGradeClassifier {
    public static void main(String[] args) {
        // 1. Declare an int score variable with a test value
        int score = 50;

        System.out.println("Testing with Score: " + score);

        // 2. Use a single if-else statement to classify the score
        if (score >= 60) {
            System.out.println("PASSED");
        } else {
            System.out.println("FAILED");
        }
    }
}
```
