```
import java.util.Scanner;

public class CompoundGrowthTracker {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);

        // --- PART 1: COMPOUND GROWTH TRACKER ---
        System.out.print("Enter an initial starting balance: ");
        double balance = scanner.nextDouble();

        System.out.println("\nInitial Balance: " + balance);

        // Step 1: Apply += compound assignment
        balance += 150.0;
        System.out.println("After Step 1 ( += 150.0 ): " + balance);

        // Step 2: Apply *= compound assignment
        balance *= 1.10; // Simulating a 10% growth rate
        System.out.println("After Step 2 ( *= 1.10 ):  " + balance);

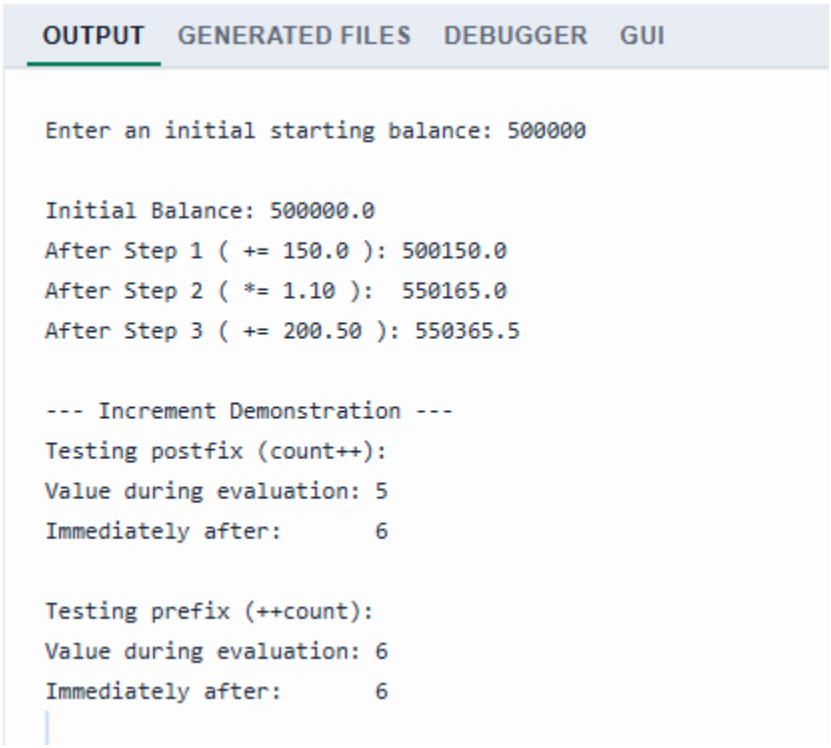
        // Step 3: Apply another += compound assignment
        balance += 200.50;
        System.out.println("After Step 3 ( += 200.50 ): " + balance);

        // --- PART 2: PREFIX VS POSTFIX INCREMENT ---
        System.out.println("\n--- Increment Demonstration ---");
        int count = 5;

        // Postfix Increment (count++)
        System.out.println("Testing postfix (count++):");
        System.out.println("Value during evaluation: " + (count++));
        System.out.println("Immediately after:       " + count);

        // Reset the counter back to 5 for a fair comparison
        count = 5;

        // Prefix Increment (++count)
        System.out.println("\nTesting prefix (++count):");
        System.out.println("Value during evaluation: " + (++count));
        System.out.println("Immediately after:       " + count);

        scanner.close();
```


```
        /*
         * REQUIREMENT: EXPLANATION OF DIFFERENCE
         *
         * Postfix (count++) evaluates to the original value first, and then increments.
         * That is why the value during evaluation displays '5', but updating happens immediately
after to make it '6'.
         *
         * Prefix (++count) increments the variable immediately before evaluating its value.
         * That is why the value during evaluation displays the updated value '6' right away.
         */
    }
}
```
