```java
import java.util.Scanner;

public class SentinelSum {

    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        int total = 0;

        System.out.println("Enter integers to add (enter -1 to stop):");

        while (true) {
            int input = scanner.nextInt();

            if (input == -1) {
                break;
            }

            total += input;
        }

        System.out.println("Total sum: " + total);
        scanner.close();
    }
}
```
